Memo to File:

RE: TOSCO  
ACT/047/001

This pilot project site was visited by Mary Ann Wright with Joe Merino of TOSCO on November 20, 1979 for the purpose of viewing the spent oil shale revegetation test plots. The results of this work, begun in 1976, are summarized in an interim EPA/USDA report entitled Revegetating Processed Oil Shale and Coal Spoils on Semi-Arid Lands, February, 1979. The test plots appeared quite successful and showed promise of easily achieving original cover, or higher, on spent shale dumps.

Joe Merino stated that plans for mine and plant development will be submitted within several months to the Division. The plans will be reviewed at this time and brought to the attention of the E.C.C. for review.
